

CPU Holders

When it comes to comfort and convenience, little things can make a big difference in how efficiently you use your existing desk space, and how well you feel at the end of the day.

At CPS, we offer products that solve the problems of limited workspaces as well as keeping employees comfortable and productive during the course of a long work day.

A vertically mounted CPU Holder is an effective way to store the CPU in a safe and easy-to-reach place that is unobtrusive and user friendly.

All CPU Holders are built with a powder coated 16 gauge steel slide clamp system and are supported by a strong compact laminate super structure.

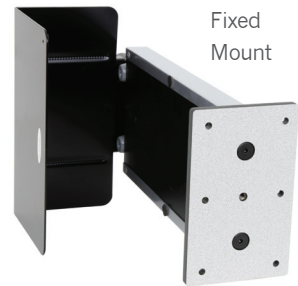

Hardware and Wrench Included
