

Security Locking CPU Holder

When it comes to comfort and convenience, little things can make a big difference in how efficiently you use your existing desk space, and how well you feel at the end of the day.

At CPS, we offer products that solve the problems of a limited workspace as well as keeping employees comfortable and productive during the course of a long work day.

A vertically mounted CPU Holder is an effective way to store the CPU in a safe and easy-to-reach place that is unobtrusive and user friendly.

A locking CPU holder provides extra security by clamping the CPU in from all sides and locking down this position with a key lock mechanism.

VCP7520
